

# Electro-Stimulating Implants for Bone Regeneration:

Parameter Analysis on Design  
and Implant Position

## Outline

- Background
- Method and Materials
- Results of Numerical Simulation
- Discussion and Outlook

## Bone defects

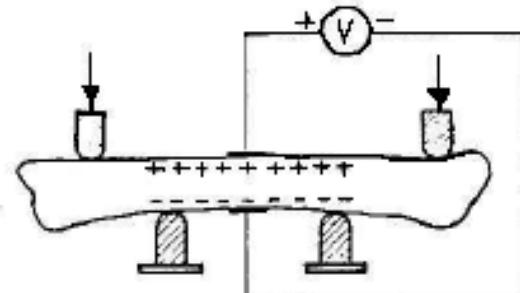

- Tumor
- Infection
- Fracture
- Implant  
  loosening

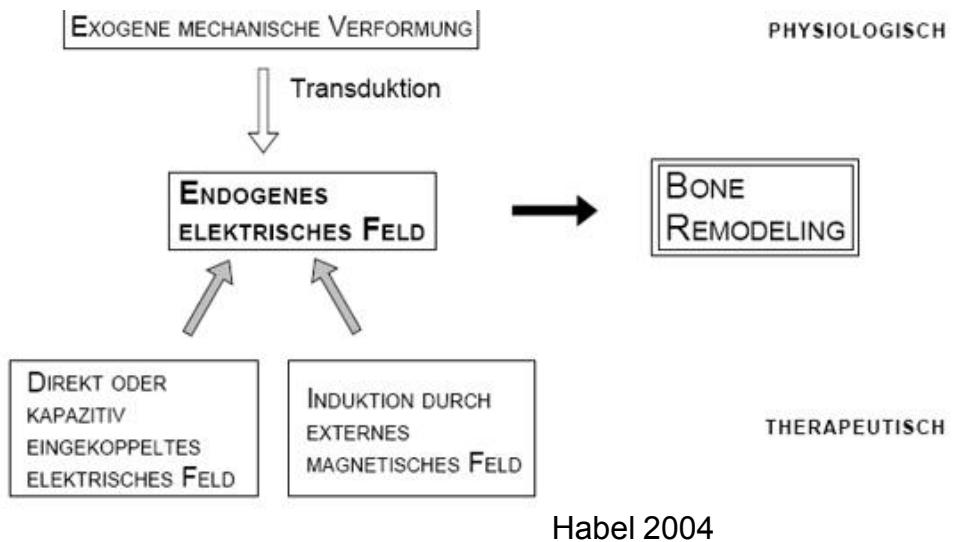

## Why electro-stimulation of bone tissue?

- Bone growth
- Bone regeneration
- Fracture healing

## Theory: Reciprocal piezoelectric effect

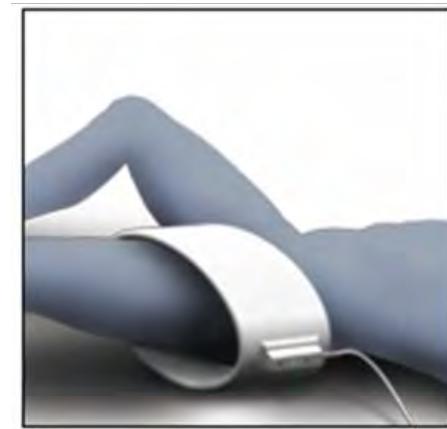

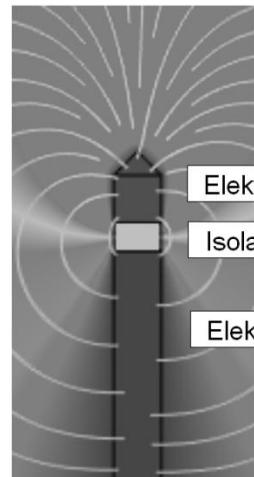

Piezoelectric effect  
Yasuda et al. 1957

# Clinical Application of Electro-stimulation

Treatment of avascular femoral head necrosis by ASNIS-S screw

stimulation parameter:  
sinusoidal, 20 Hz, 700mV

Stryker Trauma GmbH, ASNIS III S-Series operative technique manual

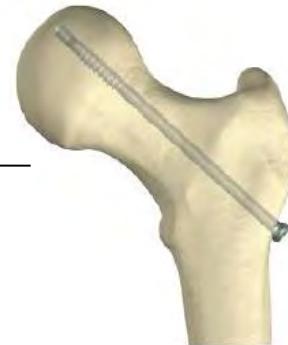

## Methods

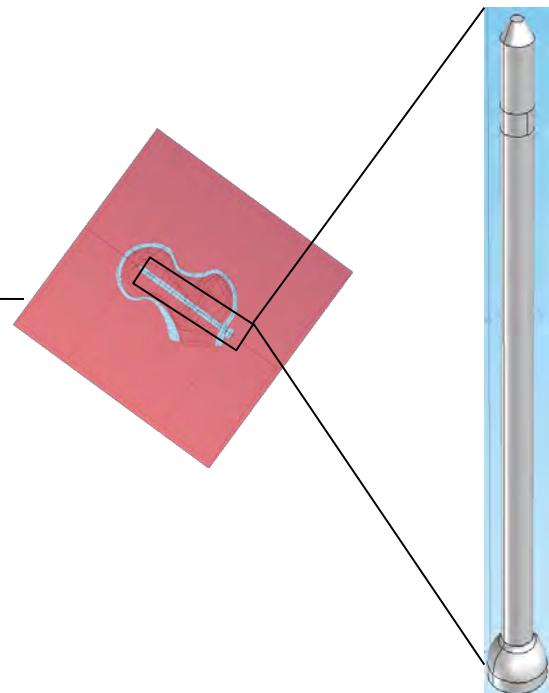

Real

Artificial femur (Sawbone)

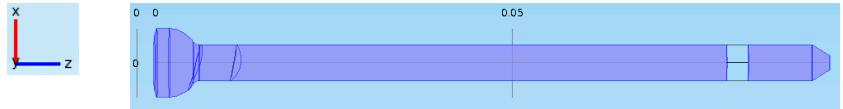

Comsol Multiphysics

## COMSOL Settings

- Geometry shape order: Linear
- Module: AC/DC module-Electric currents-Frequency domain

- Boundary conditions

ASNIS screw: Electric potential (700mV) and electric isolation

- Mesh

Screw boundary: free triangular, max element size: 35 µm

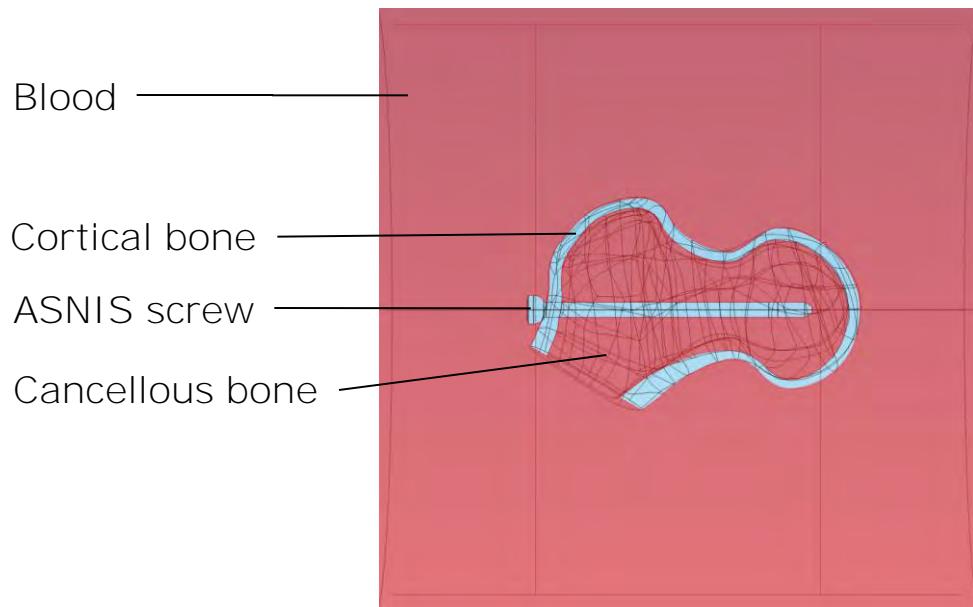

Bone: free tetrahedral, max element size: 1.5 mm

Surrounding material: free tetrahedral, max element size: 2 cm

Total approx. 1,28 million elements, approx. 1,7 million DOF

- Solver: Iterative solver- Conjugate gradients

## Material Parameters

Material	Conductivity $\sigma$ [S/m]	Relative Permitivity $\epsilon_r$
Human Blood	0.7	5 260
Cortical bone	0.020045	25 119
Cancellous bone	0.078902	4 020 200

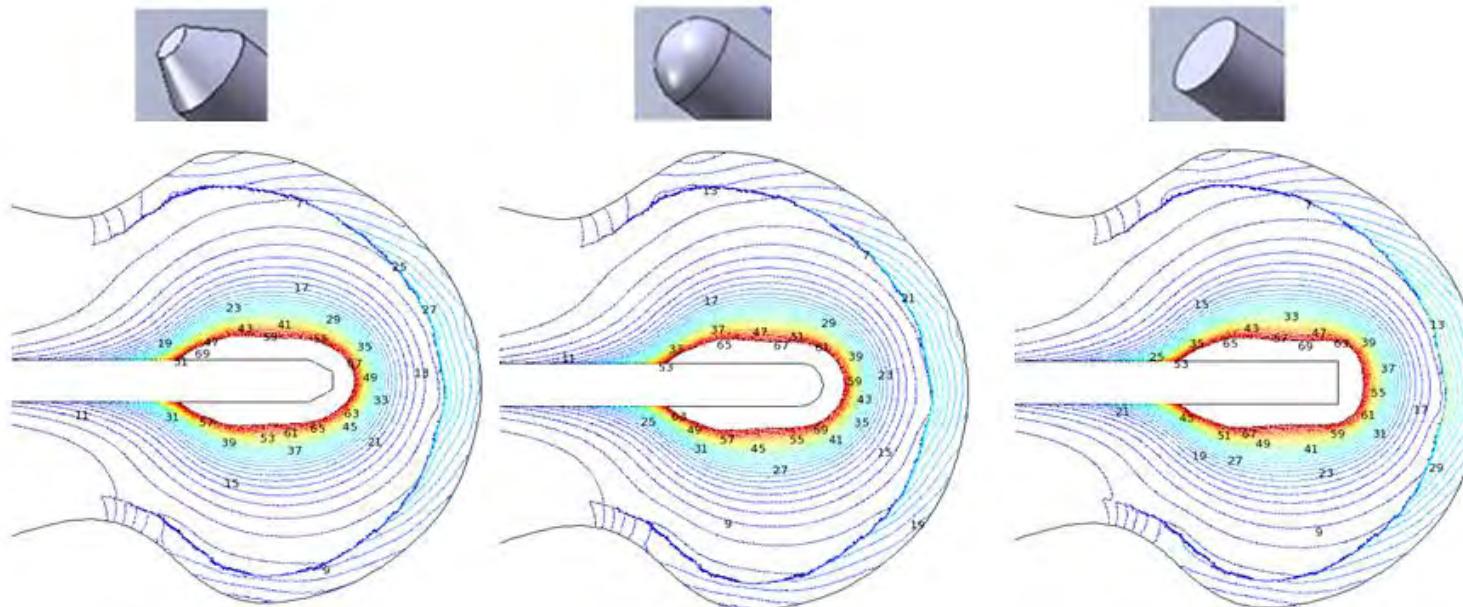

- Sinusoidal external magnetic field 20Hz
- Voltage in the implant 700mV

## Parameter variation - Tip shape

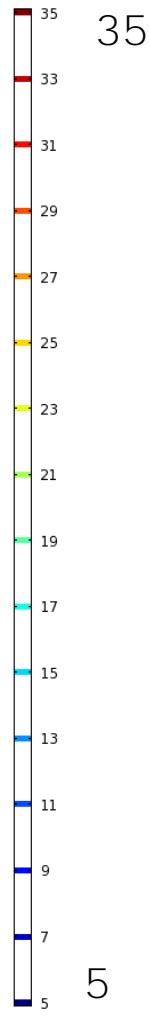

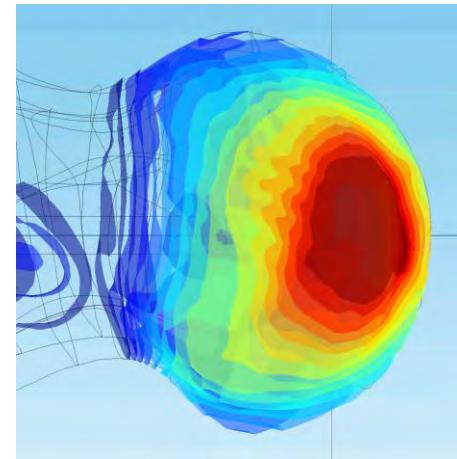

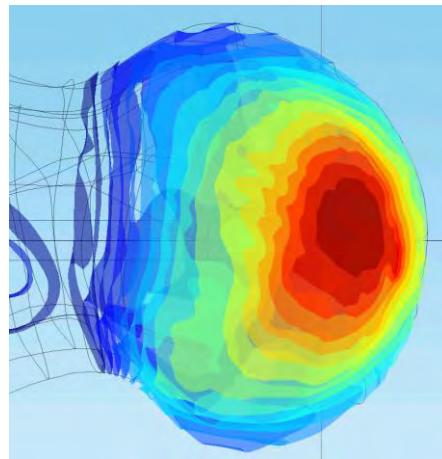

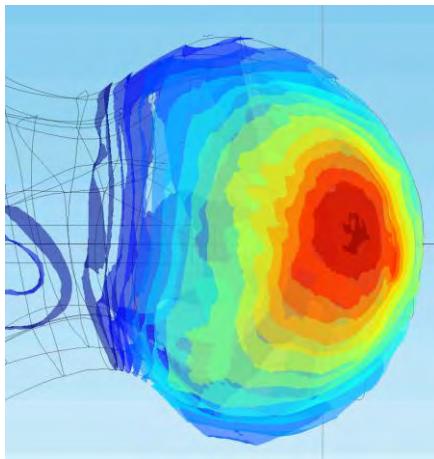

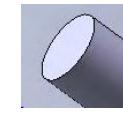

Contour: Electric field norm (V/m)

- Optimized electric filed for avascular femoral head necrosis: 5-70V/m

W. Kraus Magnetfeldtherapie und magnetisch induzierte Elektrostimulation in der Orthopädie. Orthopäde, V 13, PP 78-92, 1984

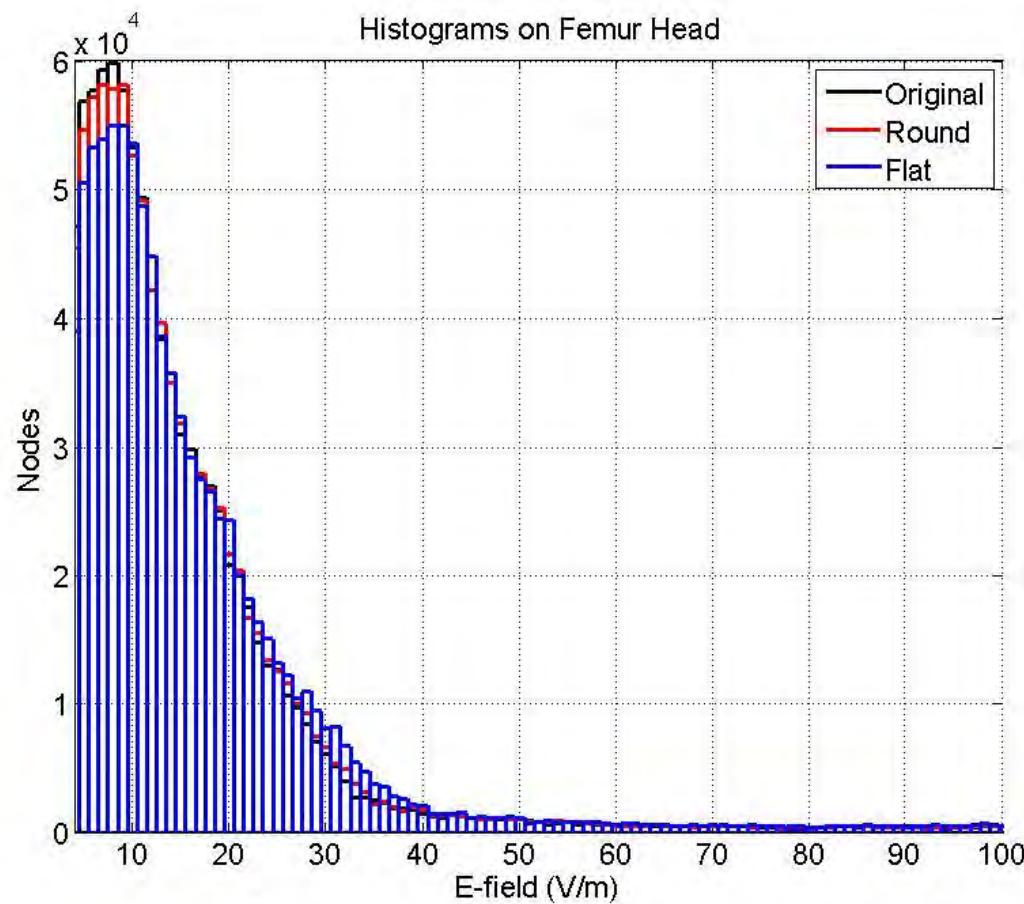

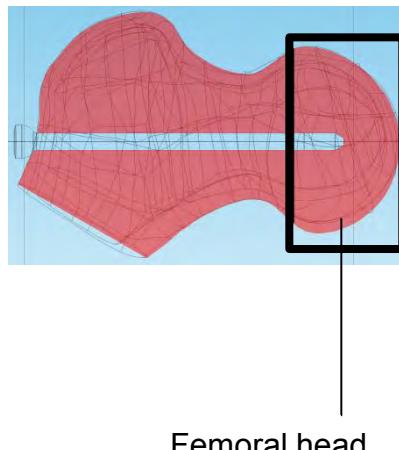

## Parameter variation - Tip shape

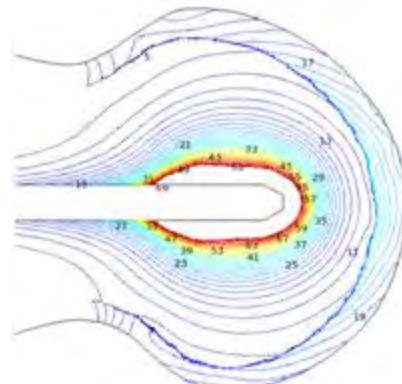

Isosurface: Electric field norm (V/m)

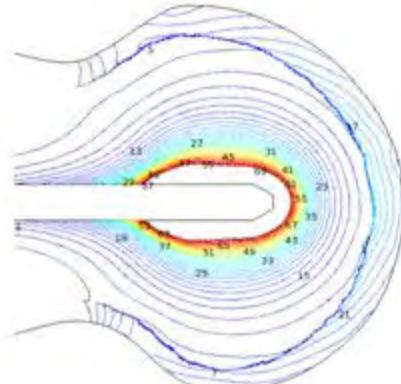

## Parameter variation - Tip shape

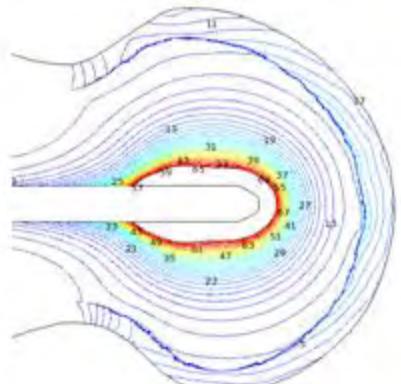

## Parameter variation – Screw positioning backward

F5

Isosurface: Electric field norm (V/m)

## Parameter variation – Screw positioning forward

## Discussion

- Numerical simulation is not yet validated
- Artificial bone compares to real human femoral head geometry
- Bone defects are not considered

## Outlook

- Simulation with bone material parameter data of our working group
- Simulation and validation with a real human femoral head
- Classification of patients bone defects according to own MRI data
- Simulation with different bone defects

# Kind thanks
